Amendment Under 37 C.F.R. § 1.116 Atty. Dkt. No.: 71470-0002 U.S. Patent Application No.: 10/781,665 Customer No.: 57362

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims replaces all prior versions, and listings, of claims in this application:

## 1-13. Canceled

14. (Previously Presented) A diaphragm edge of a speaker, comprising:

a material formed by compressing components, including silicon rubber;

an emboss formed from the material and positioned on a front surface of the diaphragm edge;

a first adhesion portion disposed at an inner circumference of the diaphragm edge; a second adhesion portion disposed at an outer circumference of the diaphragm edge; a roll disposed between the first and second adhesion portions; and

a raised portion provided on a lower surface of the roll to be convex in shape, the raised portion forming a line that is positioned in a direction parallel to the inner or outer circumference of the diaphragm edge,

wherein the roll is one of an up-roll, a down-roll, an N-roll, an M-roll and a W-roll.

15. (Previously Presented) The diaphragm edge of claim 14, wherein a width of the raised portion is between 0.2 mm – 1.4 mm and the maximum height of the raised portion from the lower surface is 0.2 mm – 1.3 mm.

- 16. (Withdrawn) A diaphragm edge of a speaker, comprising:
- a material formed by compressing components, including silicon rubber;

an emboss formed from the material and positioned on a front surface of the diaphragm edge, the emboss including:

a center line average (Ra) between 2.44  $\mu$ m – 28.70  $\mu$ m,

a maximum peak to valley roughness height (Ry) between 14.25  $\mu$ m – 120.00  $\mu$ m, and a ten point height (Rz) between 7.90  $\mu$ m – 97.00  $\mu$ m.

17. (Withdrawn) A diaphragm edge of a speaker, comprising:

a material formed by compressing components, including silicon rubber and powdered viscose rayon;

an emboss formed from the material and positioned on a front surface of the diaphragm edge, the emboss having:

a center line average (Ra) between 2.44 μm – 28.70 μm,

a maximum peak to valley roughness height (Ry) between 14.25  $\mu$ m – 120.00  $\mu$ m, and a ten point height (Rz) between 7.90  $\mu$ m – 97.00  $\mu$ m.

18. (Withdrawn) A diaphragm edge of a speaker, comprising:

a material formed by compressing components, including silicon rubber and powdered viscose rayon;

5

an emboss formed from the material and positioned on a front surface of the diaphragm edge, wherein the viscose rayon is powdered to have a length between 0.1 mm - 3.0 mm, the emboss having:

Atty. Dkt. No.: 71470-0002

Customer No.: 57362

a center line average (Ra) between 2.44  $\mu$ m – 28.70  $\mu$ m, a maximum peak to valley roughness height (Ry) between 14.25  $\mu$ m – 120.00  $\mu$ m, and a ten point height average roughness (Rz) between 7.90  $\mu$ m – 97.00  $\mu$ m.

19. (Withdrawn) A diaphragm edge of a speaker, comprising:

a material formed by compressing components, including silicon rubber and powdered viscose rayon;

an emboss formed of the material and positioned on a front surface of the diaphragm edge, wherein the weight ratio between the silicon rubber and the viscose rayon is 100:3, the emboss having:

a center line average (Ra) between 2.44  $\mu$ m – 28.70  $\mu$ m, a maximum height (Ry) between 14.25  $\mu$ m – 120.00  $\mu$ m, and a ten point height average roughness (Rz) between 7.90  $\mu$ m – 97.00  $\mu$ m.

20. (Previously Presented) A diaphragm edge of a speaker, comprising:

a material formed by compressing components, including silicon rubber and powdered viscose rayon; and

Amendment Under 37 C.F.R. § 1.116 Atty. Dkt. No.: 71470-0002 U.S. Patent Application No.: 10/781,665 Customer No.: 57362

an emboss formed from the material and positioned on a front surface of the diaphragm edge, wherein the diaphragm edge comprises:

a first adhesion portion disposed at an inner circumference of the diaphragm edge;

a second adhesion portion disposed at an outer circumference of the diaphragm edge;

a roll disposed between the first and second adhesion portions; and

a raised portion provided on a lower surface of the roll to be convex in shape, the raised portion forming a line that is positioned in a direction parallel to the inner or outer circumference of the diaphragm edge,

wherein the roll is one of an up-roll, a down-roll, an N-roll, an M-roll and a W-roll.

- 21. (Previously Presented) The diaphragm edge of claim 20, wherein a width of the raised portion is between 0.2 mm 1.4 mm and the maximum height of the raised portion from the lower surface is 0.2 mm 1.3 mm.
- 22. (Previously Presented) The diaphragm edge of claim 20, wherein the emboss has a center line average (Ra) between 2.44  $\mu$ m 28.70  $\mu$ m, a maximum peak to valley roughness height (Ry) between 14.25  $\mu$ m 120.00  $\mu$ m, and a ten point height (Rz) between 7.90  $\mu$ m 97.00  $\mu$ m.
